

## **Question and Answer Sheet**

### **What do you know about living in our neighborhood?**

Nothing, but we do know something about change, planning, and positive attitudes. If you have a seemingly impossible problem, there is no better place to start. We can learn from each other. What do we have to lose?

### **Why do you care?**

Do you remember Laylah Peterson? She was a beautiful five year-old girl, who was shot and killed, while she sat in her Grandfather's lap. Three young men shot up the wrong house in response to a prior homicide. This must end. We must show our young men a better way.

### **Aren't more resources needed?**

Absolutely! We like to think of this as a chemical reaction. A and B are combined to get C. If you mix A and B in a container, it might take 10 years to convert all of A and B to C. If you use a catalyst, the process is greatly increased. A is private resources. B represents public resources. C is the desired outcome. The catalyst is the individual.

Furthermore, success with this process will attract more private and public resources.
